Hi,

This error suggests that AGWA cannot find the HGR.dbf file. You may not have this file in the correct folder, or your environmental variables are not set properly.

Please make sure that you've installed and set up your directories according to the instructions, and have set the environmental variables. See Tutorial 1 or the online documentation for AGWA 1.5 for detailed installation directions on how to set your environmental variables. The HGR.dbf file should be located in the AGWA datafiles directory.

Let us know if that helps.

Lainie
